

ABSTRACT OF DISCLOSURE

A function control apparatus, which controls the functions of an image processing apparatus using a remote control, includes a remote control signal receiver receiving a remote control signal output from the remote control; a memory unit storing major function information and additional function information of the image processing apparatus; a controller causing the additional function information stored in the memory unit to be displayed and causing an additional function that is selected based on the displayed additional function information to be performed, in response to the remote control signal containing a request to display the additional function information; and a display unit displaying the additional function information controlled by the controller. The additional function information is displayed as on-screen-display (OSD) data.
